CHRONOBIOLOGY INTERNATIONAL
Vol. 19, No. 6, pp. 1225–1232, 2002

SUBJECT INDEX TO VOLUME 19

A

Accidents, time-of-day incidence for children, 615–631
Activity patterns, in young domestic chicks, influence of mothering on the distribution of, 543–559
Age, comparisons for task-load-dependency of right and left-brain hemisphere rhythm in reaction time to light signals, 1087–1106
Aging and the circadian rhythm of melatonin, 1171–1182
  suppression of melatonin by illumination of upper and middle visual fields in, 883–891
Aldosterone, circadian rhythm in plasma concentration and its seasonal modulation in the camel in the Sahara Desert, 683–693
Alertness, of residents, impact of night-float rotation on, 893–902
Annual rhythms, of sleep in those with mental retardation, 441–459
Annual weeds, circadian response to glyphosate and glufosinate, 405–422, 805–806
Arabidopsis, linking of GIGANTEA and SPINDLY genes to the clock pathway that controls circadian characteristics of transpiration in, 1005–1022
Athletes, jet lag after eastward and westward time-zone transition, 743–764
Atrial fibrillation, chronic, circadian rhythm of atrioventricular conduction for prediction of long-term survival of patients with, 633–648
Atrioventricular conduction, prediction of long-term survival in patients with chronic atrial fibrillation from circadian rhythm of, 633–648
Atrioventricular heart block, symptomatic third degree, morning preference in onset of, 785–791

B

Biological rhythms, in human bone marrow and blood cells, 101–127
Blood cells, rhythms in, 101–127
Blood pressure, ambulatorily monitored, multiple-component analysis for modeling the circadian variability of, 461–481
Body temperature pharmacological effects of vinorelbine on circadian rhythms of, 43–55
  24h rhythm, role of gonadal steroids and prostaglandins in regulation for women in luteal phase, 721–730
Bone marrow progenitor production, in-vitro circadian rhythm of, 57–67

DOI: 10.1081/CBI-120017999
0742-0528 (Print); 1525-6073 (Online)

www.dekker.com

rhythms in, 101–127
Brain hemisphere rhythm, in reaction time to light signals, task-load-dependency of, 1087–1106
Breast, normal and neoplastic, circadian concepts in, 221–235

C

Camel, circadian rhythm in plasma aldosterone concentration and its seasonal modulation in the Sahara Desert, 683–693
Cancer chronotherapeutics and circadian rhythms, 1–19
of 5-fluorouracil, 177–189
tumor-based rhythms of anticancer efficacy, 21–41
Chemotherapy chronomodulated clinical value and possibilities for dissemination in the United States, 275–287
delivery with irradiation, 191–205
circadian, for gynecological and genitourinary cancers, 237–251
and rhythms in human gastrointestinal mucosa and skin, 129–140
standard, versus combination chronotherapy for colorectal cancer, 289–297
Chicks, young domestic, mothering influence on the distribution of activity in, 543–559
Childhood trauma, time-of-day incidence of, 615–631
Chlamydomonas reinhardtii, as a unicellular model for circadian rhythm analysis, 325–343
Chronic pain, seasonal variation in effect of spa therapy on, 483–495
Chronobiotic effects, of the melatonin agonist LY 156735 following a simulated time shift, 915–936
Chronomodulation of chemotherapy, clinical value and possibilities for dissemination in the United States, 275–287
of chemotherapy and irradiation, 191–205
Chronotherapy of cancer, 1–19
of colorectal cancer, 207–219
combination, versus standard chemotherapy for colorectal cancer, 289–297
of human lung cancer, chronobiological concepts underlying, 253–273
insights from, 157–175
and quality of life, 299–312
Ciclograma, as a tool for detection of rhythmicities in sleep/wake cycles, 793–803
Circadian clocks induction of the regulation of seasonal responses in the migratory blackheaded bunting, 865–881
as marker rhythms of circadian system function, 141–155
as a molecular calendar, 507–516
temperature effect on amplitude of, 807–864
Circadian period lengths, of lipid synthesis mutants of Neurospora, defective temperature and intact pH-compensation in, 517–529
long, relation of melatonin dose to entrainment of a free-running blind person with, 649–658
responses, to light stimuli in nocturnal rodents, 659–670
Circadian phase responses, to light stimuli in nocturnal rodents, 659–670
Circadian rhythms of ambulatorily monitored blood pressure, modeling by multiple-component analysis, 461–481
of annual weeds in response to glyphosate and glufosinate, 405–422, 805–806
of atrioventricular conduction, prediction of long-term survival in patients with chronic atrial fibrillation from, 633–648
of blood pressure, heart rate, and double product in liver glycogen storage disease, 765–783

of body temperature and locomotor activity, pharmacological effect of vinorelbine on, 43–55
and cancer chronotherapeutics, 1–19
Chlamydomonas reinhardtii as a unicellular model for analysis of, 325–343
and the chronotherapy of human lung cancer, 253–273
of core temperature, suitabilities of various temperatures for measurement of, 579–597
of DNA synthesis in nasopharyngeal carcinoma cells, 69–76
during cycling exercise and finger-tapping task, 1137–1149
of endogenous ubiquinone plasma level, 599–614
of melatonin, relation to aging, 1171–1182
of murine bone marrow progenitor production, 57–67
of nitric oxide synthase activity in mouse tissue, 393–404
in normal and neoplastic breast, 221–235
of oviposition and feeding activity in Japanese quail, effects of cyclic administration off melatonin on, 1107–1119
in plasma aldosterone concentration, 683–693
of rest–activity, contribution to quality of life in cancer patients, 313–323
selective effect of paraventricular–subparaventricular hypothalamic lesions on, 345–360
sleep disorder, following haloperidol treatment, 947–959
of starvation-induced hypothermia in sheep and goats, 531–541
time-patterned drug administration, 157–175
tumor based, of anticancer efficacy, 21–41
Circadian system, and mood, 1151–1169
Circadian variation, in oxidative stress markers in healthy and type II diabetic men, 423–439
Clock genes food entrainment in the liver, 1073–1086
of the German cockroach, novel linking power between vertebrate and invertebrate, 1023–1040
Clock pathway, that controls circadian characteristics of transpiration in Arabidopsis, linking of GIGANTEA and SPINDLY genes to, 1005–1022
Clock phase-response curve, hamster, from summerlike light:dark cycles and its role in daily and seasonal timekeeping, 1053–1072
Cockroach, novel linking power of clock gene between vertebrate and invertebrate, 1023–1040
Colorectal cancer chronotherapy of, 207–219
combination chronotherapy versus standard chemotherapy for, 289–297
metastatic, marker rhythms of circadian system function in patients with, 141–155
Cortisol, 141–155
Cyclic activities, circadian rhythms in, 1137–1149

D

Diabetes, type II, circadian variation in oxidative stress markers in healthy men and men with, 423–439
Dim light melatonin onset, prediction by sleep logs of young adults with self-selected sleep times, 695–707
Diurnal rhythm, in isometric muscular performance, difference with eumenorrheic menstrual cycle phase, 731–742
DNA synthesis, circadian rhythms in nasopharyngeal carcinoma cells, 69–76

Drosophila ananassae, temperature dependent eclosion rhythmicity in the high altitude Himalayan strains of, 1041–1052

E

Eclosion rhythmicity, temperature dependent, in the high altitude Himalayan strains of Drosophila ananassae, 1041–1052
Entrainment to food, continued anticipatory activity in rats made cirrhotic by chronic CCl4 treatment, 1073–1086
  photoperiodic, in the migratory blackheaded bunting, 865–881
  temperature effect on, 807–864
Eumenorrheic menstrual cycle phase, difference in the diurnal rhythm in isometric muscular performance with, 731–742

F

Feeding activity, in Japanese quail, effects of cyclic administration of melatonin on circadian rhythms of, 1107–1119
5-Fluorouracil, clinical pharmacokinetics with consideration of chronopharmacokinetics, 177–189
Food entrainment, continued anticipatory activity in rats made cirrhotic by chronic CCl4 treatment, 1073–1086
Free-running totally blind people, relation of melatonin dose to entrainment of, 649–658

G

Gastrointestinal mucosa, rhythms in, 129–140
Gender comparisons for task-load-dependency of right and left-brain hemisphere rhythm in reaction time to light signals, 1087–1106
  differences in morningness–eveningness preference, 709–720
Gender analysis of medication (symposium report), 1213–1216
Genitourinary cancers, circadian chemotherapy for, 237–251
GIGANTEA gene, link to the clock pathway that controls circadian characteristics of transpiration in Arabidopsis, 1005–1022
Glufosinate, circadian response of annual weeds to, 405–422, 805–806
Glyphosate, circadian response of annual weeds to, 405–422, 805–806
Gonadal steroids, role in regulation of the 24h body temperature rhythm of women in luteal phase, 721–730
Gynecological cancers, circadian chemotherapy for, 237–251

H

Haloperidol treatment, circadian rhythm sleep disorder following, 947–959
Handgrip strength rhythm, comparisons for task-load-dependency of right and left-brain hemisphere rhythm in reaction time to light signals, 1087–1106
Heat resistance, ultradian rhythm when coupled to trehalose levels in continuous cultures of the yeast Saccharomyces cerevisiae, 361–375
Heritability, of daily temporal organization of laying behavior of Japanese quail, 377–392
Hypertension, the tolerance-hyperbaric test as a chronobiologic approach for improved diagnosis of, 1183–1211
Hypothalamic lesions, paraventricular–subparaventricular, selective effect on circadian function, 345–360
Hypothermia, starvation induced, circadian modulation in sheep and goats, 531–541

I

Ionizing radiation, chronobiology of the mammalian response to, 77–100
Irradiation, chronomodulated delivery with chemotherapy, 191–205
Isometric muscular performance, difference in the diurnal rhythm with eumenorrheic menstrual cycle phase, 731–742

J

Japanese quail, variability and heritability of daily temporal organization of laying behavior of, 377–392
Jet lag, in athletes after eastward and westward time-zone transition, 743–764

K

Ketamine, treatment-time-dependent difference of pharmacological response and toxicity of, 937–945

L

Laying behavior, of Japanese quail, variability and heritability of daily temporal organization of, 377–392
Light stimuli in nocturnal rodents, circadian phase and period responses to, 659–670
  novel wheel access diminishes light-induced phase delays in vivo with no effect on per1 induction by, 671–682
Liver, food entrainment of clock genes in, 1073–1086
Liver glycogen storage disease, circadian pattern of blood pressure, heart rate, and double product in, 765–783
Locomotor activity circadian rhythms, pharmacological effects of vinorelbin on, 43–55
Lung cancer, chronobiological concepts underlying the chronotherapy of, 253–273
Luteal phase, role of gonadal steroids and prostaglandins in regulation of the 24h body temperature rhythm of women in, 721–730

M

Melatonin aging and the circadian rhythm of, 1171–1182
  daily rhythms, validity of temporal parameters as an indicator of morningness, 561–577
  effects of cyclic administration on circadian rhythms of oviposition and feeding activity in Japanese quail, 1107–1119
  prediction of dim light onset by sleep logs of young adults with self-selected sleep times, 695–707
  relation of dose to entrainment of a free-running blind person with a long circadian period, 649–658
  role of morning administration in improving adaptation of night-shift workers, 903–913
  suppression in older volunteers by illumination of upper and middle visual fields, 883–891
Melatonin agonist LY 156735, chronobiotic effects following a simulated time shift, 915–936
Mental retardation, annual rhythms of sleep fragmentation in individuals with, 441–459
Migratory blackheaded bunting, photoperiod entrainment and induction of the circadian clock regulating seasonal responses in, 865–881
Mood and the circadian system, 1151–1169
  of residents, impact of night-float rotation on, 893–902
Morning preference, in onset of symptomatic third-degree atrioventricular heart block, 785–791

Morningness, validity of temporal parameters of the daily rhythm of melatonin levels as an indicator of, 561–577
Morningness–eveningness preference, gender differences in, 709–720
Mothering, influence on the distribution of activity in young domestic chicks, 543–559
Motor spontaneous tempo, in cyclic activities, 1137–1149
Multiple-component analysis, for modeling the circadian variability of ambulatorily monitored blood pressure, 461–481

N

Nasopharyngeal carcinoma cells, circadian rhythms of DNA synthesis in, 69–76
Neurospora, defective temperature and intact pH-compensation of circadian period lengths of lipid synthesis mutants of, 517–529
News and comments, 1001–1004
News and views, 497–505
Night-float rotation, impact on sleep, mood, and alertness of residents, 893–902
Night-shift workers, role of morning melatonin administration and attenuation of sunlight exposure in improving adaptation of, 903–913
Nitric oxide synthase activity, circadian variation in mouse tissue, 393–404
Nocturnal rodents, circadian phase and period responses to light stimuli in, 659–670

O

Oncology, applications of the chronobiology of the mammalian response to ionizing radiation in, 77–100
Oscillators, environmental, 507–516
Oviposition, in Japanese quail, effects of cyclic administration of melatonin on circadian rhythms of, 1107–1119
Oxaliplatin toxicity, in rats, pharmacological blockage of serotonin biosynthesis and circadian changes in, 1121–1136
Oxidative stress markers, circadian variation in healthy and type II diabetic men, 423–439

P

Paraventricular–subparaventricular hypothalamic lesions, selective effect on circadian function, 345–360
per1, lack of effect of novel wheel access on induction by light, 671–682
Pharmacokinetics, clinical, and consideration of chronopharmacokinetics of 5-fluorouracil, 177–189
Pharmacological blockage, of serotonin biosynthesis and circadian changes in oxaliplatin toxicity in rats, 1121–1136
Pharmacological response, of ketamine, treatment-time-dependent difference of, 937–945
Phase advance shift, chronobiotic effects of the melatonin agonist LY 156735 following, 915–936
Phase shifting, temperature effect on, 807–864
Phase-response curve, hamster clock, from summerlike light:dark cycles and its role in daily and seasonal timekeeping, 1053–1072
pH-compensation, in circadian period lengths of lipid synthesis mutants of Neurospora, 517–529
Photoperiod entrainment, in the migratory blackheaded bunting, 865–881
Positive affect, investigation of a circadian component in, 1151–1169
Prostaglandins, role in regulation of the 24h body temperature rhythm of women in luteal phase, 721–730

Q

Quality of life in cancer patients, contribution of the rest-activity circadian rhythm to, 313–323
and chronotherapy, 299–312

R

Radiation effects, chronobiology of the mammalian response to, 77–100
Rest-activity circadian rhythm, contribution to the quality of life in cancer patients, 313–323
Rest–activity cycle, 141–155

S

Seasonal responses, circadian clock regulating, induction in the migratory blackheaded bunting, 865–881
Seasonal variation in effect of spa therapy on chronic pain, 483–495
of endogenous ubiquinone plasma level, 599–614
of modulation of plasma aldosterone concentration in the camel in the Sahara Desert, 683–693
of sleep fragmentation in those with mental retardation, 441–459
Serotonin biosynthesis, pharmacological blockage in rats, 1121–1136
Skin, rhythms in, 129–140
Sleep, of residents, impact of night-float rotation on, 893–902
Sleep disorder, of circadian rhythm following haloperidol treatment, 947–959
Sleep logs, of young adults with self-selected sleep times, prediction of dim light melatonin onset by, 695–707
Sleep/wake cycles, ciclograma as a tool for detection of rhythmicities in, 793–803
Society for Light Treatment and Biological Rhythms annual meeting abstracts, 961–1000
Spa therapy, seasonal variation in effect on chronic pain, 483–495
SPINDLY gene, link to the clock pathway that controls circadian characteristics of transpiration in Arabidopsis, 1005–1022
Starvation-induced hypothermia, circadian modulation in sheep and goats, 531–541
Sunlight exposure attenuation, role in improving adaptation of night-shift workers, 903–913

T

Temperature compensation, in circadian period lengths of lipid synthesis mutants of Neurospora, 517–529
effect on entrainment, phase shifting, and amplitude of circadian clocks and its molecular bases, 807–864
Temperature dependent eclosion rhythmicity, in the high altitude Himalayan strains of Drosophila ananassae, 1041–1052
Temperature measurements, comparison of suitabilities for measurement of the circadian rhythm of core temperature in field studies, 579–597
Timekeeping, daily and seasonal, role of the hamster clock phase-response curve from summerlike light-dark cycles in, 1053–1072
Time-of-day incidence, of childhood trauma, 615–631
Time-patterned drug administration, 157–175
Time-zone transition, jet lag in athletes after, 743–764
Tolerance-hyperbaric test, as a chronobiologic approach for improved diagnosis of hypertension, 1183–1211
Toxicity, of ketamine, treatment-time-dependent difference of, 937–945
Transpiration, in Arabidopsis, linking of GIGANTEA and SPINDLY genes

to the clock pathway that controls circadian characteristics of, 1005–1022
Treatment-time-dependent pharmacological response and toxicity difference, of ketamine, 937–945
Trehalose, ultradian rhythm levels coupled to heat resistance in continuous cultures of the yeast Saccharomyces cerevisiae, 361–375
Tumor-based rhythms, of anticancer efficacy in experimental models, 21–41

U

Ubiquinone plasma level, endogenous, circadian and seasonal variation of, 599–614
Ultradian rhythm, of trehalose levels coupled to heat resistance in continuous cultures of the yeast Saccharomyces cerevisiae, 361–375

V

Variability, of daily temporal organization of laying behavior of Japanese quail, 377–392
Vinorelbine, pharmacological effects on body temperature and locomotor activity circadian rhythms in mice, 43–55
Visual field illumination, upper and middle, suppression of melatonin in older volunteers by, 883–891

W

Wheel access, novel, as a cause of diminished light-induced phase delays in vivo with no effect on per1 induction by light, 671–682
White blood cells, 141–155

Y

Yeast Saccharomyces cerevisiae, ultradian rhythm of trehalose levels coupled to heat resistance in continuous cultures of, 361–375
